

## Nationally Known Children's Hospital

### **What does the company do?**

This hospital is ranked nationally in 10 pediatric specialties and is one of the leading teaching hospitals in the country.

### **What does CoreIntegrator do for them?**

CoreIntegrator provided a non-PO invoice workflow solution that integrates with Microsoft Dynamics GP. This allows the hospital to process their invoices faster and coordinate decisions across the various departments from a single location. CoreIntegrator worked with the hospital to define all of the actors who participate in the workflow process and then implement that within the CoreIntegrator workflow designer.

### **How do we make their life easier?**

Processing of invoices is always a cumbersome task; CoreIntegrator significantly reduces the time spent in that area. This efficiency increase allows the Hospital to focus on their critical mission of helping children get well. This also helps the hospital to keep costs down for processing and get greater insight into how invoices are flowing through their system. By working with this hospital, we are proud to make a difference in their process, which in turn empowers them to make the same difference for their patients that other hospitals do for us.
