

## Satellite Communications Provider

### **What does the company do?**

This company is the only satellite communications company that offers truly global voice and data communications coverage. A technology innovator and market leader, Iridium, in collaboration with its vast partner network, is advancing the way global enterprises conduct daily mission-critical activities through reliable, low-latency communications services.

### **What does CoreIntegrator do for them?**

CoreIntegrator Workflow assists with Scanning, Payables workflow, Purchase Request workflow, and Project Creation workflow. These workflows all involve the accounts payable department and their processing of invoices. Due to SOX requirements, Iridium has special requirements for their new vendor workflow. They also are implementing a purchase request workflow, also called an “EA” (Expense Authorization”) for all purchases equal to or greater than \$10,000. For PO Matching, that encompasses both 2-way and 3-way matching.

### **How do we make their life easier?**

CoreIntegrator helps business work smarter and more efficiently. In the accounts payable department, we are helping Iridium stop the paper shuffle and reduce the amount of data entry. Another big benefit for them is that CoreIntegrator provides full traceability of all the actions that are taken within the system. This is huge for compliance and auditing that has become part of everyday life for large businesses. Through the initial workflows, Iridium will see that the benefits of CoreIntegrator can extend far beyond AP into all other areas of their business as well!
